

Climate Apocalypse

Our Journey from the age of prosperity to the age of environmental grief

Vitezslav Kremlik

Compact yet encyclopedic – brief chapters covering everything, with exhaustive links and references

Brevity is the soul of wit – or genius. This book covers just about every significant topic related to climate change, debunking the prevalent myths. Each of the chapters could be a book, and the authors have read the appropriate books and provide links to them in the footnotes. The chapters themselves provide easily digested summaries.

Power and control are the themes that unite all of the discussions. The people who shape your opinion have strong vested interests in getting you to see things their way. There is a vast amount of money to be made in scaring us.

Global warming is a huge industry. The world's richest man, Elon Musk, sells electric cars, solar panels and such, none of which would not be profitable without vast government subsidies. The subsidies make no sense absent the fear of global warming. Scientists have been divided on the reality of global warming since the beginning. However, the believers in global warming have convinced the voters, and they in turn have convinced government and academia to throw billions of dollars at global warming. Scientists who don't believe in it lose their funding and their ability to publish. There is a strong financial incentive to embrace the hysteria.

The same can be seen in the other hysterias of our age. There is a huge amount of philanthropic money backing social justice, culminating in Black Lives matter. Conversely, authors who believe that there are meaningful and measurable differences among human populations find it very hard to get published. The gender warriors made a lot of money in the '90s decrying the "fact" that girls were ignored in school. Untrue – even then they were the majority, with better grades. Abigail Schrier's recent "Irreversible Damage" describes the lucrative industry that has grown up around convincing kids they were born the wrong sex, and treating the made-up problem.

There is a huge amount of money in pharmaceuticals. That's the province of another billionaire, Bill Gates. A spate of best-selling books at the time of this writing describe the way that this money has resulted in regulatory capture and made independent journalism almost a thing of the past when it comes to Covid 19 and the inoculations. Especially The Real Anthony Fauci by Robert F Kennedy Junior has revived the discussion of how the same happened with AIDS in the 1980s.

Climate Apocalypse is a tour de force examination of the power of money to corrupt science in the realm of climate. There is simply no money to be made in saying that there is no problem. There are billions to be made if there is a problem. Where, then, does a budding young scientist stake his career? Obviously, on the proposition that there is a problem, the solving of which urgently needs scientists with skills such as his.

I have reviewed a couple of dozen books on the topic of global warming, starting with Bjorn Lomborg's Skeptical Environmentalist two decades ago. I was pleased to see that there was not a single one that author Vítězslav Kremlik does not mention. The truth has been available for a long time. Despite that fact, however, money has prevailed. Establishment sources have captured the high ground of university professorships, public school textbooks, television broadcasting and so on. Being a climate skeptic makes eminently logical sense. Socially, it can make one an outcast. It goes against the narrative.

While making money is a major part of the agenda driving the global warming hysteria, there is a long-standing and darker undertone that the author touches on every now and again. The deepest pocketed philanthropists such as John D. Rockefeller and Bill Gates (Senior, and now Junior) subscribed to the club of Rome thesis that there are simply too many people in the world. They would like to see that number reduced.

One of the most valuable aspects of the book is its coverage of the origins of the Bilderberg Group, the Club of Rome and the World Economic Forum, all of which adopt the Malthusian notion that the human herd needs to be thinned. These groups have actively supported birth control, euthanasia, forced sterilization and the gay rights agenda – anything to curtail our fertility. Many contemporary observers – though Kremlik does not mention it as it is not relevant to his climate argument – see a population control agenda behind the Covid 19 pandemic.

Kremlík concludes the book on a note of optimism. "Mankind needs a positive vision, not environmental grief. And we do have reasons for optimism. World population growth has already begun decelerating. It is expected to stabilize by 2100 at some ten billion people. World poverty and malnutrition keeps falling. This is great news for the "Anthropocene," the age of humans."

If the depopulation agenda of Covid 19 is real, and mechanisms such as those described by Peter and Ginger Breggins in Covid 19 and the Global Predators – we are the Prey are real, our numbers may shrink far further and more abruptly than Kremlík anticipates. If that happens, the global warming scam is knocked into a cocked hat. We could see a return to a world of honest values, one with more need than ever for honest science.

This is a five-star effort by any measure. The table of contents below gives a very clear view of what's in the book. I have excerpted valuable quotes from a few of the chapters.

TABLE OF CONTENTS

Don't Panic!

A Brief History Of Climate

Cold Quaternary

Climate Disruption In The Stone Age

Desertification Of The Green Sahara

My Name Is Bond, Gerald Bond

The End Of Vikings In Greenland

Little Ice Age

Climate Change Can Fuel Wars

A Century Of Risk

Eugenics

Nature Reserves

DDT

Population Bomb

Club Of Rome

Ehrlich's Wager

Chernobyl

The Ozone Hole

Ecological Footprint

Science In Crisis

Science-Based Policy

The Wizard Of Baca Grande

Maurice Strong begins his autobiography "Where on Earth Are We Go-ing?" with a vision of the upcoming apocalypse. It is narrated as a science fiction story set in the year 2031. An enlightened dictator, Rolf Schmidt from Germany, is leading mankind to rise from the ashes of a climate apocalypse. "He's no Adolf Hitler, but he nevertheless borrowed from Hitler the tactic of winning his office democratically and then granting himself emergency powers, giving him virtually total authority. Unlike Hitler, however, he has, in his few months in office, demonstrated a remarkable combination of benevolence, fairness, and toughness."

The founder of the UN Environmental Program, Maurice Strong, was probably one of the most influential members of the Club of Rome. This wealthy industrialist (president of the Power Corporation) was a friend of the Canadian Prime Minister, and the Canadian government eventually entrusted him with the management of the External Aid Office (CIDA). He proved so successful that in 1972, he was chosen to chair the first UN environmental conference in Stockholm.

To ensure publicity for the conference, he hired Barbara Ward, a World Bank economist, to write the book Only One Earth. Even then scientists were hired by politicians. This is the book that coined the phrase "sustainable development."

Birth Of The IPCC

Forging The Consensus

Very Likely

Thou Shalt Not Exceed X Degrees

Glaciersgate

Africagate

An average person would probably think twice before scaring poor Africans with statements like that. But—as the British writer and political scientist Richard North revealed—the IPCC based this bold statement on a single source only. They quoted it without fact-checking from Canadian eco-activist group International Institute for Sustainable Development (IISD), specifically from a study written for IISD by Ali Agoumi, a Moroccan carbon offset salesman. He took his data not from scientific literature but from reports by UN bureaucrats. Yet only one of these UN reports, the one from Morocco, was talking about the possibility of lower crop yields. Other reports indicated the opposite!

Polarization Of Society

First of all, it is necessary to ensure quality in the media so that only genuine truth can be published. Who decides what is true? Well, every political regime has a different version of the truth, but the general rule of thumb is that whatever the power elite says is true. Ask experienced journalists who have survived several regimes. They will tell you: A journalist who is incompetent to flexibly adapt to changing regimes can be sent to a re-education camp to understand what happens to be true this week.

Skeptical Scientists

Fred Singer and Roger Pielke figure here. Also Michael Schellenberger and Bjorn Lomborg. A good who's who.

Profitable Non-Profit Sector

Bureaucrats understand that they would get no public sympathy if they demonstrated in the streets for more paperwork, longer-form templates, and more expensive paperclips. Instead, they hire activists to do it for them. And the activists are trained in finding nice words to advocate for Big Government. Such people are called "sock puppet" activists.

Christopher Snowdon's study *Sock Puppets: How the Government Lobbies Itself and Why* from 2012 notes that in Britain, 27,000 charities receive 75% or more of their budget from the government. However, the European Commission never finances groups that express serious reservations about the Commission's political agenda. Groups that receive money from the Commission will not bite into the hand that feeds them. Among NGOs, this creates a caste system like in medieval India. Those that are friendly to the Commission can live in luxury and outspend their opponents.

Energy Poverty

The Path Ahead

Kremlík endorses GMO's, but without the necessary caveat. Genetic modification yields an organism that is amenable to digestion just the same as a natural product. However, Monsanto's GMO seeds are made to work in conjunction with glyphosate (Roundup) which has been banned in Europe because it is carcinogenic. Stephanie Seneff has a highly credible and far more damning indictment in her book *Toxic Legacy*. Bottom line: GMO's are probably okay, but only as an alternative to hybridization.
